

Category	Insight
Dataset Overview	Analyzed 8,314 sales transactions to understand sales performance, profitability, product trends, and regional business performance.
Business Objective	To analyze sales and profit data to identify key revenue drivers, profitable segments, and improvement opportunities.
Overall Performance	The dataset generated total sales of \$1.93M with an overall profit of \$247.96K across multiple product categories and regions.
Regional Analysis	Analyzed performance across 49 states to identify high-performing markets and understand regional sales contribution.
Top Performing State	California generated the highest sales contribution with approximately \$390K in revenue, followed by New York and Texas.
Category Performance	Technology was the highest revenue-generating category with approximately \$704K in sales, followed by Furniture and Office Supplies.
Product Analysis	Evaluated product-level performance to identify products contributing significantly to sales and profitability.
Sub-Category Profit Analysis	Copiers generated the highest profit contribution among sub-categories, followed by Phones and Accessories.
Profitability Analysis	Analyzed profit margins across categories and products to identify profitable and loss-making areas.
Loss Analysis	Some sub-categories such as Tables and Bookcases showed negative profitability, indicating areas requiring pricing or cost optimization.
Sales Trend Analysis	Analyzed monthly and yearly sales patterns to understand demand trends and business performance changes over time.
Quantity Analysis	Evaluated order quantities to understand customer purchasing behavior and product demand.
Customer Analysis	Studied customer purchase patterns to identify buying trends and business opportunities.
Recommendation 1	Focus on high-performing categories like Technology to maximize revenue growth opportunities.
Recommendation 2	Review pricing, discount strategies, and costs for loss-making sub-categories to improve profitability.
Recommendation 3	Increase focus on high-performing states while exploring growth opportunities in lower-performing regions.
Recommendation 4	Use product-level insights to improve inventory planning and sales strategies.
